

Weather Intelligence Report

Timestamp: 2026-06-23 23:56:49.376173

INPUT DATA:

Temperature: 55

Humidity: 55

Wind Speed: 14

Precipitation: 45

Cloud Cover: clear

Pressure: 1011

UV Index: 3

Season: Winter

Visibility: 0

Location: inland

PREDICTION: Rainy

AI ADVISORY:

Logistics * Ensure all guest areas, including dining, restrooms, and activity zones, are fully tented or under robust cover. * Implement rubber matting or temporary flooring on high-traffic pathways to prevent mud and mitigate slipping. * Station staff with umbrellas at key entry/exit points to assist guests and manage pedestrian flow smoothly. * Confirm backup indoor spaces are prepped for essential activities in case of heavy or persistent rain. * Proactively communicate with attendees about the weather, suggesting appropriate attire and footwear. Safety * Regularly monitor and dry all walking surfaces to prevent slip hazards, especially near entrances and food areas. * Verify all electrical equipment and cords are waterproofed, elevated, and protected from water exposure. * Strategically place first aid stations equipped for minor injuries, falls, and potential chill or hypothermia. * Ensure adequate lighting under all covered structures as rain can significantly reduce natural light. * Assign dedicated personnel to monitor weather updates and be ready to implement emergency procedures. Vendor instructions * All vendors must securely anchor their tents and canopies to withstand wind and rain effectively. * Protect all inventory, displays, and equipment with waterproof covers or by moving them to dry locations. * Ensure food preparation and serving areas are fully covered, preventing any water contamination. * Elevate all power cords and electrical connections, keeping them away from ground moisture or puddles. * Advise vendor staff to wear appropriate waterproof clothing and non-slip footwear for their safety and comfort.
